**IN THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

**Listing of Claims**

1-22. (Canceled)

23. (Currently Amended) ~~The special effect device according to claim 22-A~~  
special effect device in which picture signals are read out from a frame buffer based on an  
address signal to impart a desired special effect to the picture signals read out from said frame  
buffer, said special effect device comprising:

address signal generating means for generating a readout address signal of said  
picture signals stored in said frame buffer so that the picture signals will be output to each of a  
plurality of corresponding triangular areas of a preset size fractionated from said picture signals  
stored in said frame buffer,

wherein said address signal generating means generates the readout address signal  
of said picture signals stored in said frame buffer so that the totality of picture signals output in  
each triangular area will be preset picture signals of the same sort from one of the triangular  
areas to another; and

wherein, with the bottom side and the height of a triangle fractionated from said picture signals being Wy and Wx, respectively, said address signal generating means generates a readout address signal (X0, Y0) for reading out picture signals in an area of said triangle in case

the center of said picture signals is at the point of origin of a rectangular coordinate system by the equation (4-2):

$$X0 = f_1(x0)$$

$$Y0 = f_2(y0 + f_3(x0) \times f_4(y0)) \quad (4-2)$$

which satisfies the equations (4-3), (4-4), (4-5) and (4-6):

$$f_1(x0) = \left( \left[ \frac{x0}{w_x} \right] + 0.5 \right) \times w_x \quad (4-3)$$

$$f_2(y) = \left[ \frac{y + 0.25 \times w_y}{0.5 \times w_y} \right] + 0.5 \times w_y \quad (4-4)$$

$$f_3(x0) = \begin{cases} \frac{x0(\bmod w_x)}{w_x} - 0.5 & (x(\bmod 2w_x) \leq w_x) \\ 0.5 - \frac{x0(\bmod w_x)}{w_x} - 0.5 & (x(\bmod 2w_x) > w_x) \end{cases} \quad (4-5)$$

$$f_4(y0) = \begin{cases} w_y & (y0(\bmod w_y) \leq 0.5 \times w_y) \\ -w_y & (y0(\bmod w_y) > 0.5 \times w_y) \end{cases} \quad (4-6)$$

where

$w_x = \text{fixWidthX} \times \text{picture width}$

$w_y = \text{fixWidthY} \times \text{picture height}$

[ ] is the Gaussian symbol; and

and wherein said address signal generating means generates, by the equation (4-7):

$$X = X0 + cx$$

$$Y = Y0 + cy \quad (4-7)$$

said address signal generating means also generating a readout signal (X, Y) in case the position of the point of origin in the rectangular coordinate system of said picture signals is (cx, cy).

24. (Currently Amended) An address signal generating device for generating an address signal for reading out picture signals from a frame buffer, said address signal generating device comprising:

address signal generating means for generating a readout address signal of said picture signals stored in said frame buffer so that the picture signals will be output to each of a plurality of corresponding triangular areas of a preset size fractionated from said picture signals stored in said frame buffer,

~~wherein said address signal generating means converts a polar coordinate system of said picture signals to a rectangular coordinate system~~

wherein said address signal generating means generates the readout address signal of said picture signals stored in said frame buffer so that the totality of picture signals output in each triangular area will be preset picture signals of the same sort from one of the triangular areas to another; and

wherein, with the bottom side and the height of a triangle fractionated from said picture signals being Wy and Wx, respectively, said address signal generating means generates a

PATENT  
450100-05009

wherein said address signal generating means generates, by the equation (4-7):

$$X = X0 + cx$$

$$Y = Y0 + cy \quad (4-7)$$

said address signal generating means also generating a readout signal (X, Y) in case the position of the point of origin in the rectangular coordinate system of said picture signals is (cx, cy).

25. (Canceled)

26. (Currently Amended) An address signal generating method for generating an address signal for reading out picture signals from a frame buffer, said address signal generating method comprising:

an address signal generating step of generating a readout address signal of said picture signals stored in said frame buffer so that the picture signals will be output from said frame buffer to each of a plurality of corresponding triangular areas of a preset size fractionated from said picture signals stored in said frame buffer,

~~wherein said address signal generating step converts a polar coordinate system of said picture signals to a rectangular coordinate system~~

wherein said address signal generating step generates the readout address signal of said picture signals stored in said frame buffer so that the totality of picture signals output in each triangular area will be preset picture signals of the same sort from one of the triangular areas to another; and
